

CONTENTS

1. BASIC CONCEPTS IN NUTRITION.	1
1.1. Energy and protein balance	1
1.2. Body composition.	7
1.2.1. Body composition and its measurement	7
1.2.1.1. Background	8
1.2.1.2. Densitometry	8
1.2.1.3. Total body water	9
1.2.1.4. Anthropometry	10
1.2.1.5. Other methods for measuring body composition	11
1.2.1.6. Precision of body composition estimates	12
1.2.2. Bioelectrical Impedance Analysis	13
1.2.2.1. Basic principle of the method	14
1.2.2.2. Factors which influence BIA measurement	17
1.2.2.3. BIA as marker of tissue health	18
1.2.2.4. BIA methods used in clinical practice	18
1.3. Diagnosis of malnutrition — Screening and assessment	21
1.3.1. Definition of Malnutrition	21
1.3.2. Screening	22
1.3.3. Nutritional Assessment	23
1.3.4. Techniques used in nutritional assessment	26
1.4. Influence of malnutrition on function	32
1.5. Overnutrition – functional and clinical consequences.	36
1.5.1. Physiology of adipose tissue	37
1.5.2. Acute overfeeding	39
1.5.3. Chronic overfeeding	39
1.5.3.1. Obesity	39
1.5.3.2. Obesity and metabolic complications	41
1.5.3.3. Metabolic syndrome	43
1.5.4. Treatment of obesity	43
1.5.5. Perioperative nutritional treatment of obese patients	45
1.6. Prevalence of malnutrition	46
1.7. Nutritional requirements for health at rest and upon exercise.	53
1.7.1. Adult subjects	53
1.7.1.1. Macronutrients	53
1.7.1.2. Micronutrients	59
1.7.2. Nutritional needs of infants, children and adolescents	61
1.7.2.1. Nutrient requirements for growth and development	62
1.7.2.2. Nutrient requirements	64

2. NUTRITIONAL PHYSIOLOGY AND BIOCHEMISTRY	77
2.1. Appetite and its control	77
2.1.1. Peripheral signals	78
2.1.2. Hypothalamic pathways integrating peripheral signals	80
2.2. Digestion and absorption of nutrients	83
2.2.1. Principal sites of digestion and absorption	84
2.2.2. The small intestine	85
2.2.2.1. Carbohydrates	85
2.2.2.2. Lipids	88
2.2.2.3. Proteins	90
2.2.2.4. Vitamins	92
2.2.2.5. Water electrolytes and trace elements	93
2.2.3. The absorptive functions of the colon	94
2.2.3.1. Water and electrolytes	94
2.2.3.2. Metabolic and digestive functions	94
2.3. Energy metabolism	96
2.3.1. Calorimetry for the measurement of energy expenditure	96
2.3.2. Components of energy expenditure, measurement and determinants	99
2.3.3. Disease-related alterations in energy expenditure	100
2.3.4. Energy expenditure in intensive care	101
2.4. Carbohydrate metabolism	103
2.4.1. Carbohydrates in normal metabolism	103
2.4.2. Regulation of glucose metabolism	104
2.4.3. Effects of stress on glucose metabolism	105
2.4.4. Metabolic responses to critical illness	107
2.5. Lipid metabolism	108
2.5.1. Basic pathways in lipid metabolism	109
2.5.2. Lipid metabolism in fasting conditions	112
2.5.3. Influence of surgical stress, sepsis and organ failure	113
2.6. Protein and amino acid metabolism	115
2.6.1. Physiology	116
2.6.2. Protein turnover	117
2.6.3. Metabolism of amino acids	118
2.6.4. Whole body protein synthesis and/or breakdown	119
2.6.5. Methods to measure protein metabolism	123
2.7. Water and electrolytes in health and disease	128
2.7.1. Water and fluid compartments	128
2.7.2. Flux of fluid through the gastrointestinal tract	130
2.7.3. Role of the kidney	131
2.7.4. External fluid balance	132
2.7.5. Effects of starvation and injury	133
2.7.6. Electrolytes	133
2.8. Physiological function and deficiency states of trace elements	140
2.9. Physiological function and deficiency states of vitamins	145
2.10. Antioxidants in health and disease	153
2.10.1. Oxidative stress	154
2.10.2. Oxidation in vivo and neutralisation of RNS	155
2.10.3. Dietary recommendations for antioxidants	156

2.11. Dietary fibre: metabolism and physiological effects	157
2.11.1. Physicochemical properties and metabolism of fibre	158
2.11.2. Physiological effects of fibre in the gut and the clinical implications	162
2.12. Simple and stress starvation	170
2.12.1. Energy stores	171
2.12.2. Simple starvation	171
2.12.3. Stress starvation	173
2.12.4. Malnutrition and the response to injury	175
2.13. Influence of genotype on inflammation and metabolism	178
2.13.1. Single nucleotide polymorphisms and cytokines	178
2.13.2. Gender gene effects	180
2.13.3. Genotype insulin sensitivity and body fat mass and distribution	180
2.13.4. Genomic effects on longevity	181
2.13.5. Influence of genotype on anti-inflammatory responses to nutrients	182
2.14. Injury and sepsis	185
2.14.1. Main cytokines and their effect during injury and sepsis	185
2.14.1.1. Reaction of the immune system	186
2.14.1.2. Endocrine changes during the inflammatory response	187
2.14.1.3. The immune response exerts a high metabolic and nutritional cost upon the body	187
2.14.1.4. Adverse effects of cytokines	189
2.14.1.5. Antioxidant defences are depleted by infection and trauma	190
2.14.1.6. Influence of phenotype on the cytokine response	191
2.14.2. The neuroendocrine response	192
2.14.2.1. Neural stimuli and the sympathetic nervous system	193
2.14.2.2. Endocrine effects on metabolism	194
2.14.2.3. Therapeutic implications	195
2.14.3. Metabolic response to injury and sepsis	197
2.14.3.1. Stress response	198
2.14.3.2. Substrate metabolism	199
2.15. Metabolic response to hypoxia	203
2.15.1. Transient response to anoxia or acute hypoxia	204
2.15.2. Functional adaptation to hypoxia	205
2.15.3. Molecular adaptation to hypoxia	207
2.15.4. Nutritional consequences of chronic hypoxia	208
2.16. Nutritional aspects of chronic inflammatory disease	209
2.16.1. Chronic inflammation	210
2.16.2. Characteristic disease processes or conditions	212
2.16.3. Interventions	213
2.17. Metabolic aspects of neurological diseases	216
2.17.1. Denervation atrophy	217
2.17.2. Metabolic consequences of muscle denervation	217
2.17.3. Hormonal and systemic consequences	219
2.17.4. Amyotrophic lateral sclerosis	220

3. INDICATIONS FOR NUTRITIONAL SUPPORT	223
3.1. A clinical framework for considering the indications for nutritional support	224
3.2. A practical framework for considering the indications for nutritional support	226
3.2.1. Identify malnutrition or those at risk of malnutrition	226
3.2.2. Treat malnutrition or those at risk of malnutrition with the appropriate type of nutritional support	227
3.3. Common indications of nutritional support according to healthcare setting and disease	228
4. ORGANIZATION AND LEGAL ASPECTS	231
4.1. Organization of nutritional care	231
4.1.1. Policy, Standards and Protocols	231
4.1.2. Hospital food and catering	233
4.1.3. Education and training	233
4.1.4. Dietetics	234
4.1.5. Nutritional support teams	234
4.1.6. Purchasing and Equipment	235
4.2. Ethical and legal aspects	236
4.2.1. Beneficence and non maleficence	236
4.2.2. Autonomy	238
4.2.3. Special situations	239
4.2.4. Justice	242
5. SUBSTRATES USED IN PARENTERAL AND ENTERAL NUTRITION	247
5.1. Energy	247
5.1.1. Energy intake during nutrition support	248
5.1.2. Energy intake and acute disease stage	250
5.2. Carbohydrates	252
5.2.1. Carbohydrate metabolism in nutrition support	252
5.2.2. Carbohydrates used in nutrition support	253
5.2.3. Dosages of carbohydrates in parenteral and enteral nutrition	255
5.3. Lipids	257
5.3.1. Enteral nutrition	258
5.3.2. Parenteral nutrition	258
5.4. Proteins and amino acids	262
5.4.1. Requirements of proteins and amino acids in humans	262
5.4.2. Requirements of protein and essential amino acids in disease	263
5.4.3. Sources and chemical nature	264
5.4.4. Assessment of the biological quality of proteins	264
5.4.5. Amino acids: the building blocks of protein	265
5.5. Water and electrolytes during nutritional support	268
5.5.1. Monitoring	269
5.5.2. Normal requirements	269
5.5.3. Abnormal requirements	269
5.5.4. Oral rehydration solutions	270
5.5.5. Enteral nutrition	271
5.5.6. Subcutaneous fluids	271
5.5.7. Parenteral fluids	272

5.6. Trace elements and vitamins in parenteral and enteral nutrition	273
5.6.1. Micronutrients and trace elements	273
5.6.1.1. Individuals at risk of deficiency	273
5.6.1.2. Clinical deficiency syndromes and subclinical deficiency states	274
5.6.1.3. Optimisation of provision of micronutrients	274
5.6.1.4. Legislation from the European Union and enteral nutrition	276
5.6.2. Trace elements in PN and EN	276
5.6.3. Vitamins in EN and PN	278
5.7. Dietary fibre: definition and classification	281
5.7.1. Definition	281
5.7.2. Classifications	282
5.8. Special substrates	287
5.8.1. Antioxidants and phytochemicals in nutrition	287
5.8.1.1. What is an antioxidant?	288
5.8.1.2. Damage associated with depletion of antioxidants	288
5.8.1.3. Who might benefit from antioxidant supplements: biomarkers of oxidative stress	288
5.8.1.4. Overview of antioxidant strategies	289
5.8.1.5. Dietary antioxidants	290
5.8.1.6. Some remaining questions related to antioxidant therapy:	290
5.8.2. Nutrients that influence inflammation and immunity: ω -3 fatty acids	292
5.8.2.1. ω -3 fatty acids	292
5.8.2.2. Dietary sources and typical intakes of ω -3 fatty acids	293
5.8.2.3. Supplementation with long-chain ω -3 fatty acids alters the fatty-acid composition of plasma, cells and tissues in humans	293
5.8.2.4. Mechanisms of action of long-chain ω -3 fatty acids	294
5.8.2.5. Experimental studies with long-chain ω -3 fatty acids	295
5.8.2.6. Fish oil in artificial nutrition	296
5.8.3. Nutrients that influence immunity: experimental and clinical data	299
5.8.3.1. Glutamine	299
5.8.3.2. Arginine	301
5.8.3.3. Nucleotides	302
5.8.3.4. Polyunsaturated fatty acids (PUFAs)	303
5.8.3.5. Micronutrients	305
6. TECHNIQUES OF NUTRITIONAL SUPPORT	309
6.1. Enteral nutrition	309
6.1.1. Indications and administration of nutrition	309
6.1.1.1. Indications for enteral nutrition	309
6.1.1.2. Contraindications to enteral nutrition	309
6.1.1.3. Routes for enteral tube feeding	310
6.1.1.4. Choice of feeding solution	310
6.1.2. Methods of delivering enteral nutrition	312
6.1.2.1. Oral nutritional supplements	312
6.1.2.2. Transnasal access	314
6.1.2.3. Endoscopic access: PEG, PEG-J and D-PEJ	316
6.1.2.4. Surgical access: gastrostomy, needle catheter jejunostomy	323
6.1.2.5. Administration of enteral tube feeds	326
6.1.2.6. Equipment for delivering enteral nutrition	327

6.1.3.	Diets for enteral nutrition	330
6.1.3.1.	Homemade enteral (tube) nutrition	330
6.1.3.2.	Commercially prepared diets for enteral nutrition	333
6.1.4.	Complications of Enteral Nutrition	343
6.1.4.1.	Gastrointestinal complications.	344
6.1.4.2.	Mechanical complications.	345
6.1.4.3.	Metabolic complications	347
6.2.	Parenteral nutrition	348
6.2.1.	Methods of delivering parenteral nutrition.	348
6.2.1.1.	Peripheral parenteral nutrition.	348
6.2.1.2.	Central parenteral nutrition	353
6.2.1.3.	Complications associated with central catheter insertion and care	363
6.2.2.	Different systems for parenteral nutrition (AIO vs. MB)	370
6.2.2.1.	Multiple bottle system	370
6.2.2.2.	All-in-One system	370
6.2.3.	Pharmaceutical aspects of parenteral nutrition support	373
6.2.3.1.	Compounding of an AIO admixture.	374
6.2.3.2.	Stability and compatibility of parenteral nutrition admixtures	384
6.2.3.3.	Drugs and nutritional admixtures	392
6.2.4.	Composition of nutritional admixtures and formulas for parenteral nutrition	400
6.2.4.1.	Planning of parenteral nutrition	401
6.2.4.2.	PN formulas	405
6.2.4.3.	Initiating parenteral nutrition	406
6.2.5.	Metabolic complications of parenteral nutrition	411
6.2.5.1.	Clinically relevant acute metabolic complications	412
6.2.5.2.	Long-term metabolic complications	415
7.	MONITORING OF NUTRITIONAL SUPPORT	419
7.1.	Clinical monitoring	419
7.1.1.	Aims and objectives	419
7.1.2.	Integrated nutrition	420
7.1.3.	Parameters	420
7.2.	Some laboratory measures of response to nutrition	421
7.2.1.	Nitrogen balance.	422
7.2.2.	Proteins as markers of nutritional status	423
7.2.3.	Other laboratory markers	425
7.3.	Refeeding syndrome.	427
7.3.1.	Pathophysiology	428
7.3.2.	Clinical manifestation	428
7.3.3.	Guidelines for prevention and treatment of the refeeding syndrome in adult patients at risk	429
8.	NUTRITIONAL SUPPORT IN DIFFERENT CLINICAL SITUATIONS.	433
8.1.	Nutritional support in severe malnutrition	433
8.1.1.	Nutrition support	433
8.1.2.	Oral nutritional support	434
8.1.3.	Enteral nutrition	435
8.1.4.	Parenteral nutrition	435

8.1.5.	Monitoring	436
8.1.6.	Rehabilitation	436
8.2.	Perioperative nutrition	437
8.2.1.	Preliminary remarks	437
8.2.2.	Patients at low risk from nutrition-related complications	439
8.2.3.	Malnourished patients	440
8.2.4.	Complicated surgical patients	442
8.2.5.	Prescription of feed	442
8.2.6.	Integration	443
8.3.	Nutritional support in critically ill and septic patients	444
8.3.1.	Enteral versus parenteral nutrition	445
8.3.2.	Energy supply	446
8.3.3.	Glucose	446
8.3.4.	Lipids	448
8.3.5.	Amino acids	449
8.3.6.	Vitamins and trace elements	449
8.4.	Nutritional support in trauma	451
8.4.1.	Pathophysiology of trauma reaction	451
8.4.2.	Nutritional support in trauma patients	453
8.5.	Nutritional support in inflammatory bowel disease	458
8.5.1.	Effect of inflammatory bowel disease on nutritional status and metabolism	458
8.5.2.	Indications for nutritional support	459
8.5.3.	Preoperative nutrition	464
8.5.4.	Relapse prevention	464
8.5.5.	Pharmaconutrition in IBD	465
8.5.6.	Symptomatic therapy	465
8.6.	Nutrition support in liver disease	466
8.6.1.	Nutrition in liver disease	467
8.6.1.1.	Oral diet	467
8.6.1.2.	Dietary supplements	467
8.6.1.3.	Enteral feeding	468
8.6.1.4.	Parenteral nutrition	469
8.6.2.	Conclusions for diagnosis related nutritional therapy	470
8.7.	Nutritional support in renal disease	473
8.7.1.	Pathophysiology	474
8.7.2.	Nutritional therapy of patients with renal disease	474
8.7.2.1.	Non-catabolic patients with stable chronic kidney disease	474
8.7.2.2.	Patients on chronic renal replacement therapy	475
8.7.2.3.	Patients with acute renal failure (ARF) and HD/CAPD patients with acute catabolic disease	479
8.7.2.4.	Solutions used for nutritional support	481
8.7.2.5.	Complications and monitoring of nutritional support	482
8.7.2.6.	Nutritional management of renal transplantation	482
8.8.	Nutrition in pulmonary and cardiac disease	485
8.8.1.	Epidemiology	485
8.8.2.	Pathophysiology and consequences of malnutrition	487
8.8.3.	Nutritional support and intervention	489

8.9. Nutritional support in acute and chronic pancreatitis	494
8.9.1. Acute pancreatitis	495
8.9.1.1. Outcome predictors	496
8.9.1.2. Physiology and pathophysiology with respect to nutrition and fluid resuscitation	497
8.9.1.3. Treatment of acute pancreatitis	498
8.9.1.4. Nutritional support	499
8.9.2. Chronic pancreatitis	505
8.9.2.1. Nutritional treatment in chronic pancreatitis	506
8.10. Nutrition support in GI fistulas	510
8.10.1. Complications of fistula	510
8.10.2. Principles of fistula management	511
8.11. Nutritional support in extensive gut resection (short bowel syndrome)	514
8.11.1. Aetiology of short bowel syndrome	515
8.11.2. Pathophysiology	516
8.11.3. Complications of SBS	517
8.11.4. Small bowel adaptation	519
8.11.5. Management of SBS	520
8.11.6. Dietary management of SBS	521
8.11.7. The role of the dietician in SBS treatment	525
8.12. Nutritional consequences of bariatric surgery	528
8.12.1. Principal bariatric modalities	530
8.12.2. Perioperative nutritional management	530
8.12.3. Expected weight loss	531
8.12.4. Early nutritional complications	532
8.12.5. Stabilization period	533
8.12.6. Long-term nutritional complications	533
8.12.7. Priorities in nutritional supplementation	534
8.12.8. Recommendations for pregnancy	537
8.12.9. Attention to children and adolescents	538
8.12.10. Refeeding the undernourished bariatric subject	538
8.13. Nutrition in the elderly	540
8.13.1. Determinants of PEM in the elderly	542
8.13.1.1. Changes in body composition and function	542
8.13.1.2. Appetite in the elderly	545
8.13.1.3. Small-bowel bacterial overgrowth	547
8.13.1.4. The ageing immune system	548
8.13.2. Drug interactions in the elderly	549
8.13.3. PEM in the elderly and outcome	550
8.13.4. Detection of undernutrition in the elderly	550
8.13.5. Changes in nutrient requirements	554
8.13.6. Nutritional intervention	557
8.13.7. Ethical considerations	560
8.14. Nutritional support in burns patients	563
8.14.1. Pathophysiology and fluid resuscitation of burn injuries	564
8.14.1.1. Metabolic response	564
8.14.2. Treatment	565
8.14.2.1. Non-nutritional measures	565
8.14.2.2. Nutritional requirements	565
8.14.2.3. Route of nutritional administration	569

8.15. Nutritional support in cancer patients.	573
8.15.1. General features of the nutritional support.	573
8.15.1. Nutritional regimens	575
8.15.2. Indications	576
8.15.3. Perioperative nutrition.	577
8.15.4. Non surgical cancer patients	579
8.15.5. Home artificial nutrition	580
8.16. Cancer Cachexia	583
8.16.1. Definition	583
8.16.2. Pathogenesis	584
8.16.3. Impact of weight loss on clinical features and outcome	589
8.17. Radiation enteropathy.	591
8.17.1. Role of parenteral nutrition.	592
8.17.2. Outcome with long-term HPN.	592
8.18. Effect of anticachectic agents in cancer	594
8.18.1. Appetite stimulating agents.	594
8.18.2. Anticatabolic agents	595
8.18.3. Anabolic agents	596
8.18.4. Others agents.	596
8.19. Nutritional support in AIDS	597
8.19.1. History and pathophysiology	597
8.19.2. Metabolic and nutritional consequences of HIV infection.	599
8.19.3. Side effects of the drugs	600
8.19.4. Indications for and aims of nutritional support	600
8.19.5. Dietary counselling.	602
8.20. Nutritional support during pregnancy	605
8.20.1. Pathophysiology	605
8.20.2. Indications for and aims of nutritional support	606
8.20.3. Parenteral nutrition in pregnancy	607
8.21. Nutritional support in neonatology	609
8.21.1. Enteral or parenteral nutrition?	610
8.21.2. Goals of nutritional support	611
8.21.3. Early nutritional management	611
8.21.4. Parenteral nutrition	612
8.21.5. Enteral nutrition	623
8.22. Nutritional support in infants children and adolescents	625
8.22.1. Diagnostic approach.	625
8.22.2. Nutritional support.	627
8.22.2.1. Enteral nutrition	628
8.22.2.2. Parenteral nutrition	641
8.23. Eating disorders – anorexia nervosa and bulimia nervosa	653
8.23.1. Pathogenesis	654
8.23.2. Physiological changes.	654
8.23.3. Clinical manifestations and complications	655
8.23.4. Complications	657
8.23.5. Nutritional assessment.	657
8.23.6. Treatment.	658
8.23.7. Long-term effects	659

8.24. Nutrition therapy for neurological disorders	659
8.24.1. Nutritional assessment	660
8.24.2. Nutritional requirements	661
8.24.3. Nutritional support	662
8.25. Nutrition and wound healing	666
8.25.1. Basic aspects of wound healing	666
8.25.1.1. Phases of wound healing	666
8.25.1.2. Non healing chronic wounds	669
8.25.1.3. Local wound management	670
8.25.1.4. Nutrition and wound healing	670
8.25.2. Nutrition and pressure ulcers	674
8.25.2.1. Classification and aetiology of pressure ulcers	675
8.25.2.2. Nutritional status and PU	675
8.25.2.3. Nutritional intervention and PU – what is currently known ..	676
8.25.2.4. Nutritional management is relevant to total PU care	677
8.26. Nutritional support in the diabetic patient	681
8.26.1. Dietary management of diabetes mellitus	682
8.26.2. Nutritional support of the diabetic	683
8.26.3. Perioperative management	686
8.27. Home artificial nutrition	689
8.27.1. Home parenteral nutrition	690
8.27.2. Home enteral nutrition	693
8.27.3. How to begin home artificial nutrition	694
