

SIG-MN Minutes Milano - meeting 08 SEP 2024 – 12:45-13:45

Present: Angélique de Man; Liis Lepp, Miriam van der Werf, Christian Stoppe, Kristine Koekkoek

Online: Karin Amrein; Oguzhan Dizdar; Kursat Gundogan; Serge Rezzi, Alan Shenkin.

Excused: Arthur van Zanten; Michael Casaer

SIG-MN Achievements 2023-24: publications (see pdf)

New members: Miriam v.d.Werf, Christian Stoppe and new request: Kristine Koekkoek (orally approved at end of meeting – she will send her cv)

Website is functional (see slide): new members will be communicated to IT officer (was Mihailo Bezmarević). Website will be improved.

LLL course slide development: Objective to be able to submit end October to LLL officers. All 4 modules were discussed and briefly one of the cases. The topics to develop in each course (in blue on slides) were validated, and some added. All will be sent to you for review and for completion. Ideally as presentation is max 40 min, we should not exceed 50 slides and NB the non-SIG-MN members who present the course are free to reduce a little the number of slides they present. To assist them, the references should be clearly indicated and easily accessible (with DOI) and have been used in our theory text. Suggestion to include as much text as possible as notes explaining the slides to assist non-SIG members in presenting the slide'

44.1: the most advanced – please comment – most comments by LL were integrated. NB: some general slides appear in 44.1 and 44.2 as these courses may be seen on the web isolate from a live general course – generalities are required.

44-2: KA will be assisted by CS for this course.

44.3: The material should include obesity. LL feels it difficult to limit the content. She proposes to inform about why some topics are not addressed (the main reason is that we are not generating a textbook and have limited time during the LLL sessions). But this info is important: create a slide at end of course, also with typical symptoms, that the students can download before the course to generate questions. MvdW will assist her for this chapter.

44.4: AdM: an advanced draft – CS will contribute for cardiac. Suggestion to reduce text per slide (while providing explanations in the comment zone) and document with images. Please **AvZ and MC** generate 5-6 refeeding slides including the figure and table present. Please **OD** generate 4-5 slides on sepsis including those present.

Clinical cases: 44.1 was shown as draft example about how to present the questions and the answers. The TE case addresses major burns which is a pathology unfamiliar to most clinicians (and CRRT). CS asked for a more global introduction on major burns and an explanation about why burns were elected as an example while most clinicians never see a burn – will be done (MB)

MB in charge of verifying if we can use figures that are available as open access. To all: please only use open access figures (and those of our course) or make sure you have the appropriate permission to use the figure.

Question: Can the slides of the course be used before the first 2025 ESPEN-live? (for national Turkish congress, and CH-Drei-Ländertagung May 2025). Slides need to have been approved by the LLL-officers, which is the reason we are speeding the process.

SIG-MN-Open session 13:45: 14:45

Present - industry (non-exhaustive list): Elena Micelli (MNI), Meike Engfer (FK), Anette Järvi (NH), Martin Hübner (NH), 25 other persons present (no list)

+ Anna Schweinlin (AS): ESPEN guideline office

Development of the guideline APP: AS showed the evolutions of the app which is still not interactive but aims at facilitating access to recommendations without needing to consult the complete documents (see slides).

Ongoing research: KA presented the status of the study VITDALIZE, AdM (new analytical tools) (slides attached). AS provided an update about the status of the GL-app. The GL app will function as e-book of the short guidelines, not as tool to enter data of patients.

Creation of the LLL 44 module & Publication CNE: several publications by the group this year dedicated to teaching and practical guideline.

MN Additives to cover specific needs: MNI representatives (Mrs Miceli and Engfer) asked questions about complements for high requirement patients, and how to administer them as they cannot be provided by enteral feeds nor usual multi-MN preparations for PN. MMB proposed to attempt a corrigendum with Elsevier specifying that such high requirements must be met by separate MN additives (but products are only partially available).

At the end of the meeting Appeal to industry for the development of analytic methods was repeated, as no progress has been made.

Next meetings:

Virtual after the congress to finalize the LLL slides – MMB will send a doodle
Open meeting in Prague (date to be determined)

Best to all.

Mette Berger. Chair&Secretary - 10 SEP 2024 (completed 30SEP)
